

Business Model Canvas (BMC) - Nasij

Strategic Frame

Nasij is positioned as a **traceability and operational control platform** for Algeria's wool value chain, designed to cover the full process while prioritizing the collection stage where control failures begin [S01](#).

9-Block Canvas

1) Customer Segments

Primary Segment

- Wool-chain operators needing end-to-end visibility:
- collection coordinators
- depot managers
- wash facilities
- transformation operators

Secondary Segment

- Upstream source actors (C1/C2/C3) who need predictable pickup and fair reconciliation [S19](#).

Institutional Segment

- Public and private stakeholders requiring chain-level reporting and compliance-grade records.

Quantified context

- Agriculture contributes 13.96% of GDP [S09](#).
- Rural share remains 24.72%, reinforcing the need for field-capable workflows [S08](#).

2) Value Propositions

For source actors

- Predictable collection missions.
- QR-backed proof of intake.
- Transparent lot status after handoff.

For operations teams

- One lot identity from collection to commercialization.
- Real-time discrepancy alerts with owner assignment.
- Better yield/loss visibility by stage.

For management and partners

- Audit-ready records and compliance support [S16](#), [S18](#).
- KPI dashboards for operational and financial decisions.

3) Channels

- Mobile app for field and source interactions (mobile-first justified by penetration and subscriptions) [S06](#), [S07](#), [S11](#).
- Web dashboard for control tower and oversight.
- Institutional onboarding through direct partnerships and pilot programs.

4) Customer Relationships

- Operational onboarding with role-based SOP training.
- Embedded support for discrepancy and reconciliation workflows.
- Quarterly value reviews tied to measurable KPI outcomes.

5) Revenue Streams

- Per-kg traceability/processing fee [A08](#).
- Per-mission logistics coordination fee [A09](#).
- Discrepancy handling fee [A10](#).
- Reporting/analytics add-ons for institutional partners [A31](#).

6) Key Resources

- Role-based mobile app and backend APIs [S20](#).
- Offline queue and replay infrastructure.
- QR issuance and scan tooling.
- Field operations team and playbooks.
- Compliance policies and audit controls [S16](#), [S17](#).

7) Key Activities

- Collection orchestration and lot indexing.
- Stage transition validation (D0/D1/D2/D3-D4).
- Alert monitoring and resolution tracking.

- Data governance and retention management.
- Partner reporting and service-level performance management.

8) Key Partners

- Collection and transport operators.
- Depot, wash, and transformation facilities.
- Institutional buyers and downstream offtake partners.
- Legal/compliance advisors for data governance.

9) Cost Structure

Main cost buckets (base case)

- Field operations fixed cost [A21](#).
- Platform engineering/cloud [A22](#).
- Compliance and governance [A23](#).
- Training and change management [A24](#).
- Variable logistics and processing support [A25](#), [A26](#).

Cost profile (base case)

- Year 1 operating envelope driven by rollout and onboarding.
- Annual cost escalation aligned with inflation context [S05](#), [A27](#).
- Margin improvement expected via discrepancy reduction and scale efficiency [A13](#), [A38](#).

Unit Economics Snapshot (Base Case)

Metric	Value	Anchor
Year 1 active source nodes	420	A02
Avg declared volume per source/year	170 kg	A03
Realization ratio	88%	A04
Traceability service fee	95 DZD/kg	A08

Metric	Value	Anchor
Avg logistics fee per mission	1,250 DZD	A09
Avg missions per source/year	3.4	A12

Strategic Coherence Check

- The model stays aligned to the challenge requirement: full-chain coverage with collection-first execution [S01](#).
- Mobile-first approach is supported by national usage patterns [S11](#), [S12](#).
- Compliance posture is explicit due personal-data obligations [S16](#), [S17](#).
- Financial logic is assumption-driven and scenario-tested in the business plan [A33](#)-[A36](#).
