

Nasij Glossary

- **Batch / Lot:** A uniquely identified wool unit that is tracked across every stage of the chain.
- **C1 / C2 / C3:** Source actor categories in Nasij workflows (farmer, butcher/slaughter source, third party source).
- **Collector:** Field operator who executes pickup missions and records initial lot metadata.
- **D0 / D1 / D2:** Processing checkpoints used in this estimate:
 - D0: declared/field-collected gross state
 - D1: depot-prepared state after initial sorting/cleaning
 - D2: washed state before transformation
- **D3 / D4:** Final commercial output classes after transformation.
- **Discrepancy Alert:** A rule-triggered exception when measured values diverge from expected ranges between stages.
- **Gross-to-Net Reduction:** Expected mass reduction between stages due to impurity removal and process loss.
- **Offline Outbox:** Local queue used when network is unavailable; operations replay when connectivity returns.
- **Realization Ratio:** Share of declared volume that is actually collected and entered into the process.
- **Traceability Coverage:** Share of lots with complete linked records from collection to commercialization.
- **Trust Score:** Internal reliability metric for operational actors based on behavior/events (e.g., cancellations, discrepancies).
- **Working Capital Buffer:** Liquidity reserve used to absorb seasonality, delayed payments, and shock periods.
