S20	Existing Nasij app architecture notes (RBAC, offline-first strategy)	Qualitative baseline	2026	Nasij repository	nassaj_app_vision.md	../../nassaj_app_vision

Notes

- DataReportal values are compiled from multiple upstream providers (including GSMA Intelligence and Ookla) and are used for market-access context, not legal obligations.

- World Bank indicator values are pulled from the API endpoint shown in each row; values can be revised in future releases.
- Some Algerian legal-host URLs have intermittent TLS compatibility issues from scripted clients; NATLEX records are retained as a stable legal index and include canonical JO references.
