

Empathy Card - YallaRent (Dual Persona)

Purpose

This empathy card captures two core actors in YallaRent's launch model: - Persona A: Student Renter (primary demand user) - Persona B: Student Provider (peer-to-peer supply user)

Context baseline: - 1,530,230 university students in 2024/2025 [S09](#) - Youth unemployment at 29.444% [S06](#) - Internet penetration at 76.9% and 54.8M mobile connections [S16](#), [S15](#)

Persona A - Student Renter

1) What They See

- Rising cost of setting up temporary student housing.
- Fragmented options in informal channels and classified listings [S26](#), [S27](#).
- No standardized campus-focused rental bundle in current local offerings.

2) What They Hear

- "Buying is safer, but expensive."
- "Borrow if you can."
- "Use marketplace groups and ask around first."
- Growing normalization of app-based service behavior because digital access is already mainstream [S15](#), [S16](#).

3) What They Think and Feel

- "I need comfort and productivity, but only for a few months."
- Anxiety about hidden damage costs or scams.
- Budget pressure linked to broader youth employment context [S06](#).

4) What They Say and Do

- Compare multiple options before paying.
- Ask peers for trusted item owners.
- Delay purchases and try low-commitment options first.
- Use mobile-first behavior for discovery and messaging [S15](#), [S18](#).

5) Pains

- High upfront purchase burden for temporary needs.
- Uncertain item quality and weak dispute handling in informal channels.

- Time loss from searching, negotiating, and arranging transport.

6) Gains

- Fast access to verified, usable equipment.
 - Transparent total cost (rental + delivery + optional protection).
 - Flexible durations aligned to semester and exam cycles.
 - Stress reduction from predictable pickup/return workflow.
-

Persona B - Student Provider (P2P Lister)

1) What They See

- Idle personal items in dorms/apartments during unused periods.
- Existing listing channels with weak trust and operational support [S26](#).
- No campus-native workflow for deposits, identity checks, and returns.

2) What They Hear

- “You can earn from unused items if it is safe.”
- “Managing renters directly is risky and time-consuming.”
- “Most people stop listing after one bad experience.”

3) What They Think and Feel

- Wants supplementary income but fears damage, loss, and disputes.
- Seeks control over availability and renter quality.
- Values low-friction listing and reliable payout timing.

4) What They Say and Do

- Starts with low-risk categories (lamp, chair, fan).
- Tests platforms before committing more items.
- Accepts paid plans only when revenue predictability is clear [A14](#), [A15](#).

5) Pains

- Manual coordination overhead.
- Weak identity certainty in informal channels.
- Unclear recourse when items return damaged.

6) Gains

- Monetize idle assets without direct commission on transactions [A28](#).
- Better trust through verification and condition evidence.
- Scalable listing operations via subscription plans beyond 3 items [A14](#).

Shared Emotional Drivers

Driver	Student Renter	Student Provider
Cost pressure	Wants lower upfront spend	Wants extra recurring income
Trust	Wants safe and verified rentals	Wants verified renters and clear protection
Convenience	Wants fast booking and delivery	Wants low-effort listing and handover
Flexibility	Wants short rental durations	Wants control over availability windows

Product Implications

1. Onboarding must be fast and mobile-optimized given connectivity behavior [S15](#), [S16](#), [S18](#).
2. Trust features are not optional; they are core retention drivers for both personas.
3. P2P monetization should remain plan-based (not commission-based) to preserve positioning [A28](#).
4. Bundle design should prioritize temporary-use economics and exam/semester timing.
